

Ideation Phase
Brainstorm & Idea Prioritization

Date	30 June 2026
Team ID	
Project Name	AI Powered Customer Support System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Manual customer support ticket management system

- ☐ Excell-based support case tracking
- ☐ Web-based customer support online portal
- ☐ Salesforce-based AI-Powered Customer Support Ticketing System
- ☐ AI-assisted case management with automated workflows and email notifications

Selected Idea

Salesforce-based AI-Powered Customer Support Ticketing System

The selected solution utilizes the Salesforce platform to efficiently manage customer support operations through **Account**, **Contact**, and **Case** management.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team came together to discuss the recurring challenges faced in customer support operations at TheChaiShop&Co. Through open discussion, the team identified key pain points experienced by support agents, support managers, and customers, as outlined in the problem statement analysis. After evaluating these issues collaboratively, the team agreed that the core problem stems from the absence of a centralized, intelligent system to manage support cases. This consensus helped the team select "Inefficient and manual customer support ticket handling" as the primary problem statement to address through the project.

Step-2: Brainstorm, Idea Listing and Grouping

Using a brainstorming approach, the team listed multiple possible solutions to address the identified problem. The ideas generated included:

- Manual ticket management system

- Spreadsheet-based case tracking
- Web-based customer support portal
- Salesforce-based AI-Powered CRM
- AI-assisted automation and email notifications

These ideas were grouped based on their feasibility, scalability, and ability to solve the core issues identified in the problem statement — namely, slow response times, lack of centralized monitoring, and inconsistent customer support. Grouping the ideas helped the team visualize which solutions were basic/manual approaches versus which offered automation and intelligence, making it easier to move to the prioritization stage.

Step-3: Idea Prioritization

After listing and grouping the ideas, the team evaluated each based on criteria such as efficiency, scalability, ease of implementation, and impact on solving the identified problem statements. Manual and spreadsheet-based systems were deprioritized due to their limited scalability and lack of automation. Web-based portals offered some improvement but lacked intelligent case handling capabilities.

The team ultimately prioritized the **Salesforce-based AI-Powered Customer Support Ticketing System**, as it directly addresses all three problem statements by offering:

- AI Suggested Replies to reduce agent response time
- SLA Tracking & Automation for consistent case prioritization
- Reports & Dashboards for centralized monitoring
- Secure Role-based Access for data security and controlled visibility

This solution utilizes the Salesforce platform to efficiently manage customer support operations through Account, Contact, and Case management, making it the most effective and scalable choice to move forward with in the project.
