Project Name	AI Powered Customer Ticket System
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The AI-Powered Customer Support Ticketing System replaces manual support ticket management with an automated and centralized Salesforce solution.

Customer cases are managed through standard and custom Salesforce objects, while record-triggered flows automate case classification, priority assignment, and SLA due date calculation. AI-generated suggested replies assist support agents in responding quickly and consistently, and reports and dashboards provide real-time insights into support operations. This solution improves response time, reduces

manual effort, and enhances customer satisfaction.
