

Project Design Phase
Proposed Solution Template

Date	26 June 2026
Team ID	
Project Name	AI Powered Customer Ticket System
Maximum Marks	2 Marks

Proposed Solution Template:

Functional Requirements

Parameter	Description
User Login & Authentication	Allows authorized users to securely log in using Salesforce credentials and role-based access control.
Customer & Contact Management	Enables users to create, update, and manage customer accounts and contact information.
Case Management	Allows support agents to create, assign, update, and track customer support cases.
Support Category Management	Organizes customer issues into predefined support categories for efficient case handling.
SLA Policy Management	Defines SLA policies and automatically calculates due dates based on case priority.
AI Suggested Replies	Generates professional customer responses using Prompt Builder and AI Prompt Templates.
Agentforce AI Assistance	Allows Agentforce to generate case-specific suggested replies using the configured prompt template.
Validation Rules	Ensures accurate and complete data entry by validating important case information.
Record-Triggered Flow Automation	Automatically performs case classification, priority assignment, SLA calculation, and email notifications.

Email Notification System	Sends automated email alerts when cases are resolved or important updates occur.
Reports	Generates reports to monitor open cases, agent performance, and SLA compliance.
Dashboards	Displays real-time charts and visual summaries of customer support activities.
AI Feedback Management	Stores agent feedback on AI-generated responses to support continuous improvement.
User Role Management	Controls user access using Profiles and Permission Sets for Support Agents, Support Managers, and Administrators.
