

Project Development Phase

FUNCTIONAL & PERFORMANCE TESTING

Date	4 July 2026
Team ID	
Project Name	AI Powered Customer Support System
Maximum Marks	

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify the correct functioning of the AI-Powered Customer Support Ticketing System. Other than the one's seen above like reports in the development phase let's see what the working model is doing These include:

Email Notification Testing & Flow Automation Testing

- Verified automatic email notifications when a support case was resolved.
- Confirmed that the customer received the correct Case Number, Status, and resolution message through Gmail.

Agentforce AI Testing

- Tested the Agentforce AI assistant using different customer queries.
- Verified conversation routing, sub-agent selection, reasoning steps, context variables, and final AI-generated responses.
- Confirmed successful execution of AI Suggested Response actions within the Agentforce workflow.

clear your browser cache and cookies, then close and reopen the browser before attempting to sign in again. Alternatively, try a private/incognito window.

3. Verify username / email. Ensure you are entering the correct username or email address associated with the account. Typing errors are common.

4. Check for autofill errors. Disable browser or password-manager autofill and type the new password manually to avoid stale saved passwords.

5. Reset password again. If the above did not work, request a new password reset link from the sign-in page and complete the reset flow. Use the most recent reset link and complete it within the link's expiration time.

6. Confirm account status. If you still cannot sign in after a new reset, your account may be temporarily locked for security reasons. Request assistance from your administrator.

Context Variables 5 Summary

Input: Input

Transition to Subagent: CST Topic

Reasoning: CST Topic

Action: AI Suggested Response

Reasoning: CST Topic

Output Evaluation: GROUNDED

The user provided a Case ID (500gL00001Dv9wEQAR). The agent routed to the CST_Topic and invoked the AI_Suggested_Response action with that Case ID and output language en_US, then returned the tool's generated suggested reply about restoring account access and asked if there was anything else to assist with.

Thank you for contacting support and for your patience. I will help you restore access. Please try the following steps in order and confirm after each step whether you can sign in.

1. Confirm password update completed. Verify you received a confirmation email or notification that your password was changed. Use the new password shown in that confirmation process.

2. Clear cache and cookies. Sign out completely, clear your browser cache and cookies, then close and reopen the browser before attempting to sign in again. Alternatively, try a private/incognito window.

AI Suggested Response Testing

- Tested the Prompt Builder by providing case details as input.
- Verified that the system generated professional AI-assisted responses based on Issue Type, Priority, and Customer Description.
- Compared the prompt input, resolved prompt, and generated response to ensure correct AI processing.

2 Resolved Prompt

You are a customer support agent.

Based on the following case details, generate a polite, professional, and helpful reply.

Issue Type: Login
Priority: Medium
Customer Description: I tried to update my password even then i cannot login.

Provide a clear response that helps the customer resolve the issue.

3 Generated Response

Thank you for contacting us and for your patience. I understand that you updated your password but are still unable to log in. I will help you troubleshoot this now.

Please try the following steps in order.

1. Confirm the new password took effect.
2. Clear saved credentials and caches.

- Log out completely from the app or browser. Close and reopen the app or browser before trying to sign in again.
- Use the exact characters of the new password. Passwords are case-sensitive.
- If you use a browser, clear cookies and cache for our site, then attempt sign-in.
- If you use a mobile app, sign out, force-close the app, and restart your device. If this app stores credentials, remove any saved login and co...

Einstein Generated Response Testing

- **Input:** Created a customer support case with Issue Type, Priority, and Customer Description.
- **Process:** Invoked the Einstein Prompt Builder to generate an AI Suggested Reply using the case details.
- **Output:** Verified that the generated response was automatically populated in the **AI Suggested Reply** field of the Case record and matched the customer's issue context.
- **Result:** Successfully generated accurate, context-aware, and professional customer support responses for the case.

AI Suggested Reply

Thank you for contacting support and for your prompt report. I understand you updated your password but still cannot log in. I will help you troubleshoot.

Please try these steps in order.

1. Confirm the password update completed.

- If you received a confirmation email after changing the password, open it to ensure the change succeeded.
- If you did not receive confirmation, attempt the password reset flow again and complete all steps.

2. Verify credentials and input methods.

- Enter your email or username exactly as registered.
- Paste the new password into the password field to avoid typing errors, then delete and retype if pasting fails.
- Ensure Caps Lock and Num Lock on your keyboard are set correctly.

3. Clear browser or app state.

- For web access, clear the browser cache and cookies or try an incognito/private window.
- For mobile apps, force close and reopen the app. If problems persist, uninstall and reinstall the app.

4. Check account status and multi-factor authentication.

- Confirm you are using the correct account if you have more than one.
- If your account uses multi-factor authentication, complete the second step (SMS, authenticator app, or email) after entering the password.

5. Attempt a password reset again.

- Use the "Forgot password" link and follow the instructions. Wait a few minutes for the reset email to arrive and check spam/junk folders.

6. Provide error details if steps do not resolve the issue.

- Tell me the exact error message shown when login fails.
- Tell me whether this occurs on web, mobile app, or both.
- Tell me the browser and device you are using.

If you prefer, I can review your account status and assist directly after you confirm the email address associated with the account. I appreciate your time. Please reply with the requested details if you still need help.
